The Trusted Partner for Lone Worker

Innovative solutions that combine technology and expertise safeguard lone workers and minimize risks. Building confidence and trust through seamless connectivity, providing total peace of mind.

Click&Protect

Certify your employees' devices to activate their protection with a simple click.

Key Metrics Dashboard

Assess engagement levels and provide targeted training to those who need it, ensuring compliance and data-driven decision-making.

Essential Safety Solutions

User-friendly apps, and devices provide essential safety features like panic buttons, GPS tracking, check-ins, risk assessments, and customizable alerts. These solutions emphasize easy setup, scalability, security, and compliance with Federal and Provincial standards, while integrating with existing systems for real-time monitoring and analytics.

Real-Time Monitoring and Support

The seamless and intuitive user interface enables workers to effortlessly check in and out while sharing their location in real time. This feature ensures regular monitoring of each checkpoint, enabling prompt assistance during emergencies.

Devices for Connectivity

Having multiple options for accessing the platforms is crucial, as it allows lone workers to stay connected and secure regardless of their circumstances or environment. We provide the most comprehensive range of access options, including:

- Computer (Web Platform)
- Mobile Phone (VigieApp)
- Tablet (Android & iOS/iPad)
- Smartwatch (WearOS) 24/7
- ICOM Radio Equipment
- Satellite Device (BivyStick)
- Telephone Access
- Safety Monitoring Center

Increased Productivity

Checkpoints can be arranged prior or during a lone worker's shift, allowing for fixed or flexible durations and enabling a limited or unlimited number of checkpoints throughout the work period.

Incoming Hands-Free Calls

Initiate hands-free calls directly to the lone worker for safety checks or emergencies.

User and Device Management

Administrators can manage all users associated with the client account, including assigning roles, customizing escalation procedures and configuring user-specific settings.

Location Beacons

Precisely locate lone workers in need of assistance within buildings using Bluetooth beacons to expedite rescue efforts.

Technology-Driven Lone Worker Safety

Our lone worker solution leverages AI and advanced technology to enhance safety. Companies trust us to create safer environments, as our application accurately detects over six unusual situations. With real-time monitoring and seamless communication, we support workers anytime, anywhere.

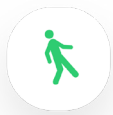

Panic Button

Users can quickly activate the SOS alarm with the VigieApp® panic button or use VigieTouch to send a manual alarm remotely.

Connection Monitoring

NEOVIGIE monitors the connection between the smartphone and the servers. If the connection is lost, an alarm is triggered automatically.

Fall Detection

The industry-leading algorithm developed by NEOVIGIE, powered by artificial intelligence, employs data from the smartphone's sensors to detect user falls.

No-motion Detection

A customizable no-motion alarm feature that enhances fall detection by identifying when a worker is inactive.

Geofencing

GPS zones can be established on the map, allowing you to associate alarm events with them. The alarm activates when the user enters a risk zone or leaves a safe area.

Safety Timer

A lone worker can initiate a countdown, after which an alarm will be triggered if it isn't stopped. This feature is useful for managing areas without phone network coverage.

VigieApp

Compatible iOS and Android

VigieApp

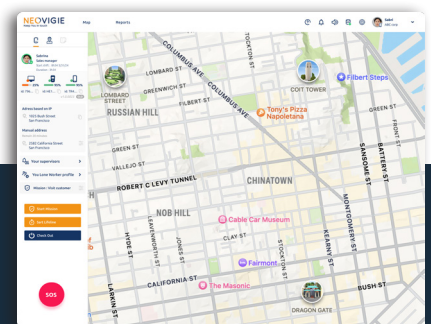

watch

Compatible Wear OS

VigieApp

web

Compatible with Safari, Chrome, Firefox

Optional
VigieTouch®

Panic Button

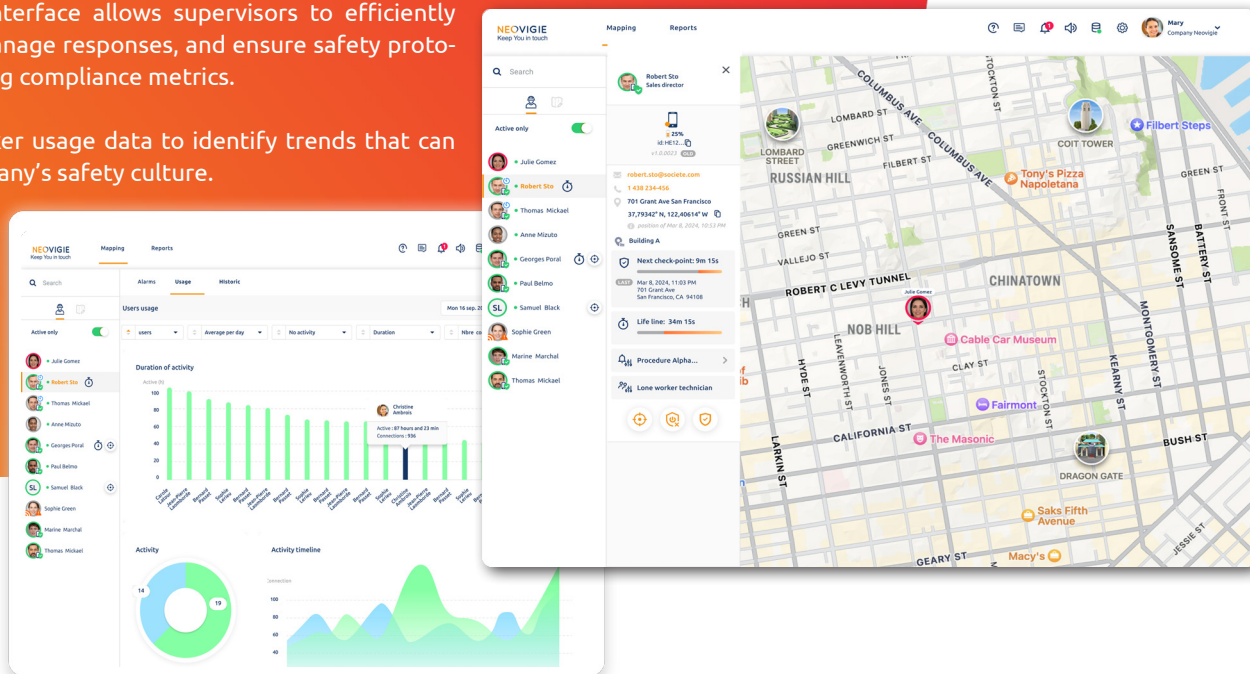

Trigger an alarm on VigieApp from a Bluetooth panic button

VigieControl® - Enterprise Cloud-Based Platform: Secure, Customizable, Scalable

Monitor lone workers 24/7 through the web platform, managing alarms with real-time status updates and notifications.

The centralized interface allows supervisors to efficiently track activities, manage responses, and ensure safety protocol adherence using compliance metrics.

Analyze lone worker usage data to identify trends that can enhance the company's safety culture.

Escalations & Alarm Notifications

Comprehensive and customizable escalation procedures enable alarms to be communicated through multiple channels, including push notifications, emails, SMS, simultaneous phone calls, and a 24/7 monitoring station. This multi-channel approach ensures that alerts reach the right people promptly, enhancing the overall response to emergencies.

Push notification

Supervisors can receive actionable alert's push notifications on VigieApp with all relevant lone worker information.

Email

The platform can send an email to the supervisors with all the pertinent information.

SMS

Without an internet connection, an SMS can be sent to all supervisors with the worker's location and other crucial information.

Voice

Initiate automated voice calls to one or multiple supervisors simultaneously.

24/7 Safety Monitoring Center

Protect your workers with our ULC-Certified 24/7 monitoring station, providing immediate emergency assistance tailored to your unique escalation plans.
